Der Einsatz eines Induktions-Schrumpfgerätes ermöglicht das Ein- und Ausschumpfen von Hartmetall- und Stahlschäften in die entsprechenden Schrumpffutter. Vorteile sind die höchste Rundlaufgenauigkeit (max. 0,003mm), die schlanke Störkontur, höchste Haltekraft und die direkte formstabile Einspannung. Für Rechts- und Linkslauf geeignet.

Using an induction shrink system enables the shrinking of carbide- and steel-shanks in the corresponding induction shrink chucks. Advantages are the highest concentricity precision (max. 0,003mm), the slim interference contour, the maximum of gripping force and the direct dimensionally stable clamping. Suitable for right- and left-hand rotation.
